

# **Datavision Using Excel**

## **Project objective**

*The objective of this project is to analyze product data using Excel formulas and visualization tools. It aims to demonstrate how various Excel functions — such as SUM, AVERAGE, MIN, MAX, IF, and text functions — can be applied to organize, calculate, and interpret data efficiently.*

*The project also focuses on using conditional formatting and charts to highlight key insights, enabling better understanding of pricing patterns and overall data performance.*

## **Dataset description**

*The product detail including product name, quantity, price and total cost. It is used to analyze sales and pricing using Excel formulas.*

## **Column description**

| <b>Column</b>           | <b>Description</b>                                                                       |
|-------------------------|------------------------------------------------------------------------------------------|
| <b>A – Product ID</b>   | <i>Unique identification code for each product (includes date and country code).</i>     |
| <b>B – Product Name</b> | <i>Name of the product listed for analysis.</i>                                          |
| <b>C – Brand Name</b>   | <i>The brand or manufacturer of the product.</i>                                         |
| <b>D – Price (\$)</b>   | <i>Selling price of each product in dollars.</i>                                         |
| <b>E – Quantity</b>     | <i>Number of units sold or available.</i>                                                |
| <b>F – Category</b>     | <i>Product classification (e.g., Electronics, Fashion, Kitchen, Outdoor).</i>            |
| <b>G – Price Range</b>  | <i>Indicates whether the product is High Price or Standard Price based on its value.</i> |
| <b>H – Day</b>          | <i>Extracted from Product ID to represent the day of sale or record entry.</i>           |
| <b>I – Country Code</b> | <i>Country abbreviation showing where the product is sold (e.g., US, UK, IN).</i>        |
| <b>J – Month</b>        | <i>Extracted from Product ID to represent the month of sale or record entry.</i>         |

## **Data Analysis Formulas in Excel**

## **Basic Data Exploration**

### **1) SUM, COUNTA, AVERAGE**

#### **a). SUM (Total Price of the products)**

- ✓ **Formula =SUM(D2:D35)**
- ✓ **Result: \$10100.**

#### **b). COUNTA (How many products exist in dataset)**

- ✓ **Formula =COUNTA(B2:B35)**
- ✓ **Result =34**

#### **c). AVERAGE (The average price of the product)**

- ✓ **Formula =AVERAGE(D2:D35)**
- ✓ **Result =\$ 297.06**

### **2) Minimum and Maximum Values**

#### **A).MIN (Identifying the minimum price among all products)**

- ✓ **Formula=MIN(D2:D35)**
- ✓ **Result=\$30.**

#### **B). MAX (Identifying the maximum price among all products)**

- ✓ **Formula = Max (D2:D35)**
- ✓ **Result = \$1000.**

### **3). Logical Function (Created a new column name Price Range-G)**

- ✓ **Formula =IF(D2>=500,"High Price",IF(D2<500,"Standard Price"))**
- ✓ **Result= High Price**

### **4) Conditional Functions – SUMIF and COUNTIF**

#### **A) SUMIF(Using SUMIF function to calculate the total price of products in the**

**Electronics category)**

- ✓ **Formula=** **Formula=SUMIF(F2:F35,"Electronics",D2:D35)**
- ✓ **Result= \$8050.**

**B) COUNTIF (Using COUNTIF function to determine the number of products with a price less than \$100.)**

- ✓ **Formula=** **Formula=COUNTIF(D2:D35,"<100")**
- ✓ **Result= 11**

**5). Text Formatting – LEFT, RIGHT, MID**

**A) LEFT Function(Created a new column named Day with the first 2 characters of each 'Product ID' using the LEFT function.)**

- ✓ **Formula=LEFT(A2,2)**
- ✓ **Result = 2**

**B) RIGHT Function (Created a new column named Country Code by extracting the last 2 characters from the 'Product ID' column using the RIGHT function.)**

- ✓ **Formula =RIGHT(A2,2)**
- ✓ **Result = US**

**C) MID Function (Created a new column named Month by extracting the 4th to 6<sup>th</sup> characters from the 'Product ID' column using the MID function.)**

- ✓ **Formula=MID(A2,4,3)**
- ✓ **Result = JAN**

**Screenshot of Workbook**

→ **In G column Red colour indicates High Price and Green colour Indicates Standard Price.**

## **Conclusion**

The analysis helped identify top selling products and pricing trends. Excel formulas simplified data summarization and classification. This project demonstrates how Microsoft Excel can be effectively used for data analysis and visualization. By applying formulas such as SUM, AVERAGE, MIN, MAX, and IF, along with conditional formatting and logical functions, the dataset was analyzed to identify pricing patterns and category-wise performance. The project highlights the importance of Excel as a powerful tool for organizing, calculating, and interpreting data efficiently. Overall, it enhances understanding of data-driven decision-making and strengthens practical skills in spreadsheet management.
